

Bonk Index (\$BNKK) Litepaper

Overview

\$BNKK is the index of BONK ecosystem coins.

100% of creator fees from \$BNKK trading are used to buy BONK ecosystem tokens. These tokens are deposited into staking vaults, allowing \$BNKK holders to stake and earn yield across the entire ecosystem.

\$BNKK aligns incentives: every trade strengthens BONK ecosystem projects, and every staker shares the rewards.

The Vision

The BONK community thrives on collaboration. “Win and help win” is the core principle. \$BNKK extends this principle into an on-chain financial model:

- Traders create volume → creator fees are collected
- Fees are recycled into BONK ecosystem tokens
- Tokens are deposited into reward pools
- \$BNKK stakers earn yield across the ecosystem
- Ecosystem projects gain liquidity, visibility, and new holders

\$BNKK turns the index concept into a living, self-sustaining system that rewards both participation and cooperation.

How It Works

1. Fee Collection

- Creator rewards from \$BNKK trading come in two forms:
 - 50% in \$SOL
 - 50% in the base token \$BNKK

2. Token Allocation

- **100% of \$SOL rewards will always be used to buy tokens for pool rewards.**
- Before whitelist approval by the BONK team: only \$SOL rewards are used.
- After whitelist approval by the BONK team: the community will decide if \$BNKK rewards should be added to the pools, burned for deflation, or split between both.
- Starting allocation for pool buys: 25% \$BONK, 25% \$DEBT, 50% \$BNKK.
- Allocation will evolve as new projects join the whitelist.

3. Automation

- Initial operations are manual, so the team can test and refine the process.
- Long-term, all steps will be automated:
 - Collecting \$SOL and \$BNKK creator rewards
 - Swapping into the correct % of each whitelisted token
 - Depositing into staking vaults
- All transactions will be logged in real time on the website for transparency.

4. Staking with Streamflow

- Purchased tokens are deposited into Streamflow reward pools.
 - \$BNKK holders stake to earn rewards from the basket.
 - Rewards stream continuously and can be claimed anytime.
-

Why Streamflow

BNKK uses Streamflow for staking and rewards because:

- **Battle tested:** trusted by the Solana community, used by leading projects
 - **Audited:** independent security reviews completed
 - **Familiar:** BONK community members already interact with Streamflow
 - **Trusted UX:** no need to connect to unknown contracts or apps
 - **Transparent:** deposits, rewards, and claims are all verifiable on-chain
-

Bootstrap Phase

- The initial pool will be funded with personal funds from the team plus a portion of supply bought on launch.
 - After this, all pools will be funded 100% by creator rewards and contributions of allocated tokens from other communities.
-

Whitelist

- Only BONK ecosystem coins are eligible.
 - Whitelist approval is determined by the BONK team.
 - Requirements: active community, liquidity, trading volume, meme traction.
 - Communities can also contribute their own tokens into \$BNKK pools to gain visibility.
-

Transparency

- Every transaction is public and verifiable on-chain.
 - Creator fee wallets, swaps, and deposits can be tracked in real time.
 - 100% of fees always flow back into rewards.
-

Benefits

For Stakers

- Exposure to the entire BONK ecosystem through one token
- Passive yield in a diversified basket of ecosystem coins
- On-chain transparency and no developer cut
- Earn a portion of the revenue usually pocketed by teams

For Projects

- Access to new holders and liquidity through inclusion in the Index
- Publicity from being part of the Bonk Index program
- Option to contribute tokens to pools, amplifying rewards and engagement

For the Ecosystem

- \$BNKK recycles value back into \$BONK and its partners
 - Strengthens the BONK flywheel through constant buy pressure
 - Creates a shared reward system that binds projects together
-

Roadmap

- Launch with \$BNKK, \$BONK, and \$DEBT reward pools
 - Open whitelist for other BONK ecosystem coins
 - Transition from manual to full automation of fee allocation and deposits
 - Community decision on how to use \$BNKK creator rewards (pool, burn, or hybrid)
 - Introduce regular allocation updates based on community and ecosystem growth
 - Grow \$BNKK into the default Bonk Index Fund on Solana
-

Closing

\$BNKK is the first on-chain index fund built for memes. By aligning incentives, it ensures every trade benefits the ecosystem and every staker shares in its growth.

Stake \$BNKK. Earn yield across the Bonk ecosystem. Win and help win.

All plans are subject to change. Input from the community is welcomed and will guide the evolution of the Index. We are here to build a great BONK ecosystem fund together.
